

## Graduate Profile

### Simon Kebblewhite

Plastics Processing Technology (Technical) - Rotational Moulding Level 4 Graduate

Johnson Outdoor, Silverdale

Simon decided to undertake his study in the plastics industry because he wanted a nationally recognised qualification and to have more work opportunities. Being paid more as he gained more qualifications was an added attraction. Simon saw opportunities to transfer his experiences in plastics to other industries. He found the engineering studies most enjoyable and beneficial and thinks he would like to be working overseas in 5 years' time.

Simon has some advice to others considering studying, "Get your work in on time, pay attention to the tutors and listen to their requests for work to be completed," he says. "It's really important to keep up to date."
